

## Prompt Global Strikes Through Space: What Military Value? (Paperback)

By Larry G Sills

BiblioScholar, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. The Air Force and U.S. Space Command have long-range plans to demonstrate the technologies necessary to execute prompt global strikes with precision conventional weapons through space launched from the U.S. homeland to any point on the globe in 90 minutes or less. While the Space Operations Vehicle concept is the postulated delivery vehicle early in the 2010 decade, long-range conventional ballistic missiles could provide an initial capability as early as 2005. In light of the potentially aggressive use of weapons of mass destruction by rogue adversaries in future wars, this paper explores the potential benefits and drawbacks of a capability to conduct prompt global strikes through space with conventional ballistic missiles and the Space Operations Vehicle. Political and military factors involved in the strategic decision to acquire, deploy, and employ such a capability are also examined, with emphasis on the Air Force's role.
